Introduction to Capstone/Mini Projects

Overview

Capstone Project (IS4110)/ Mini Project (SE 5104) is a compulsory course module to complete the Bachelor of Science Honours Degree Programme in Information Systems and Bachelor of Science Honours Degree Programme in Software Engineering offered by the Department of Computing and Information Systems (DCIS) and Department of Software Engineering (DSE), Faculty of Computing, Sabaragamuwa University of Sri Lanka. This is a group project which every Student should have to complete within their relevant Semesters. Information Systems students should complete their Capstone Project in Semester IV and Software Engineering student should complete their Mini Project in Semester V. This course will enable students to carry out project work to implement a solution for real-world IT problem, under the supervision of an internal supervisor and a mentor. The Internal Supervisor provided by the respective department is responsible for helping students if they have any internal matters and they should monitor the interaction between the students. Every group should find their own mentor who is an expert in the industry and those mentors are responsible for supporting and guiding students throughout the projects and evaluate the progress. The mentors should be aware of the students about the emerging technologies and current trends in the Software Industry and guide the students to apply those technologies to their projects. Also, Mentors should monitor the progress of the student continuously and all the students are required to submit a Project Progress Journal once in three weeks to the mentor. Mentors and Internal Supervisors can schedule meetings with the students to assess the progress as well as to discuss the project work. A student is responsible for updating the progress of the project addressing the feedback given by the internal supervisors and mentors throughout the semester and completing the final software product before the end of the semester by covering all the requirements and the scope defined initially. The Capstone Project/Mini Project is evaluated by the internal supervisors and the same panel of evaluators in the Proposal Presentation and the Final Evaluation.

The duration for the Capstone Project/Mini Project is 15 Weeks (One Semester) and it weighted 2 credits. Upon successful completion of this course, the student will be able to identify the requirements for real-world IT problems, study & enhance software/ hardware skills, demonstrate & build the project successfully by hardware requirements, coding, and emulating & testing Report & present the findings of the study conducted in the preferred domain.

Vision

Our vision is to guide the Software Engineering (SE)/Information Systems (IS) students to achieve their individual goals and to lead the next generation of IT professionals in advancing the Information Technology and Business Process Management (IT/BPM) industry.

Mission

Our mission is to produce Software Engineering/Information Systems graduates to design and develop quality software solutions, work effectively within challenging environments, and be good professionals. Since the field of Software Engineering/Information Systems has rapidly grown and diversified, we have to create Software Engineering/Information Systems graduates who have high-quality standards, broad-based education and experiential learning in Software Engineering, create knowledge through pioneering scholarship and impactful research, enrich our students' development and leadership skills, and nurture the inherent innovation of our students.

Objectives

Objectives of the Capstone Project/Mini Project work:

- Offer students a glimpse into real world problems and challenges that need IT based solutions
- Enable students to create very precise specifications of the IT solution to be designed.
- Introduce students to the vast array of literature available of the various research challenges in the field of IT
- Create awareness among the students of the characteristics of several domain areas where IT can be effectively used.
- Enable students to use all concepts of IT in creating a solution for a problem
- Improve the team building, communication and management skills of the students.
- Helps in exploring career opportunities in their areas of interest.
- Gives an insight into the working of the real organizations/companies.
- Develop students' ability to apply knowledge and techniques learnt in theoretical classes to develop software products for real world problems.
- Gives an insight of a real working environment of an organization to the students
- Assist students in exploring career opportunities in their areas of interest.
- Develop students' reporting, presenting and demonstrating ability.

Intended Learning Outcomes

Upon successful completion of this course, the student will be able to:

ILO1 Discover potential research/Development areas in the field of IT

ILO2 Conduct a survey of several available literature in the preferred field of study.

ILO3 Compare and contrast the several existing solutions
for research/development challenge

ILO4 Demonstrate an ability to work in teams and manage the conduct of the research
study or Development project

ILO5 Formulate and propose a plan for creating a solution for the
research/development plan identified

ILO6 To report and present the findings of the study conducted in the preferred
domain

Introduction to Project Progress Journal

Project Progress Journal is

- A way to document all Capstone/Mini Project activities throughout the semester.
- An important mechanism for the internal supervisors and mentor to evaluate and assess a student's attitude and ability and also to monitor the status of the student's project throughout the semester.

Students are

- Required to write clearly and honestly all activities performed and then to summarize their work every week.
- Highly encourage to maintain a separate file/folder to compile all their findings/ printouts/ datasheets as a complement to this progress journal.

Reminder to students

- This journal must be presented to your Mentor and the Internal Supervisor once in three weeks.
- All activities conducted must be recorded at the activities section in the Project Progress Journal. Signatures of relevant persons can also be recorded as proof of your claim at the activities section (optional but highly recommended).
- This journal must be submitted to your internal supervisor and mentor along with your Final Report to be graded by your internal supervisor and the mentor at the required date (Refer to Capstone/Mini Project Guidelines).

Student Information

Full Name	Labugamage Binoj Madhuranga	
Registration No	21CSE0158	
Email	lbmadhuranga@std.foc.sab.ac.lk	
Telephone Number	0763546936	
Internal Supervisors' Details	Name	Mr.G.A.C.A Herath
	Profession	Lecturer
	Contact Details	0769109796
Mentors' Details	Name	Ms.E.A.A.U.Wickramasinghe
	Profession	Software Engineer at Mobitel (PVT) Ltd,
	Contact Details	070530105
Mentors' Details	Name	
	Profession	
	Contact Details	
Project Title	Gemora (Digital Marketplace for Gem Auctions)	
Project Description	Gemora is a cutting-edge digital marketplace transforming gemstone auctions and trade with transparency, trust, and efficiency at its core. The mobile-first platform features certified gemstone listings, live bidding, and secure payment options, including cryptocurrency. To ensure authenticity, Gemora incorporates strict identity verification and certification checks, while its automated auction system minimizes fraud risks. By reimagining the traditional gemstone market, Gemora delivers a safe, modern, and accessible ecosystem for buyers, sellers, and industry players worldwide.	

Week 1

Duration	Start Date	2025.08.25	End Date	2025.08.31
Date	Task Completed	Objectives of the tasks	Problems	Solutions
2025.08.25	Team discussion	Finalize and agree on functional requirements	Lack of effective communication	Established a structured plan for communication
2025.08.26	Product analysis	Identify gaps and unique features	Overlap with existing features	Compared carefully to highlight originality
2025.08.27	Mentor consultation	Clarify project direction and scope	Misinterpreting mentor's feedback	Summarized points and verified with mentor
2025.08.28	None	None	None	None
2025.08.29	Introduction to Figma	Learn fundamentals of Figma design tool	Limited practical knowledge	Used step-by-step tutorials
2025.08.30	Resource search for Figma designs	Collect useful design materials	Difficulty locating suitable sources	Asked mentor for suggestions
2025.08.31	Group session	Assign Figma-related design responsibilities	Some members unfamiliar with the tool	Shared learning resources and tutorials
Summary for the week	Concentrated on clarifying the project scope and gaining initial exposure to Figma.			
Task for the next week	Continue exploring Figma and begin drafting preliminary design layouts.			
Remarks	Group meeting with the team members	Identify design tasks for Figma	Some members not familiar with Figma	Provided tutorial links
Signature of the Student			Date	2025.08.31
Signature of the Mentor			Date	2025.08.31

Week 2

Duration	Start Date	2025.09.01	End Date	2025.09.07
Date	Task Completed	Objectives of the tasks	Problems	Solutions
2025.09.01	Mentor discussion with the team	Identify concerns in the submitted proposal	Confusion regarding the career module	Conducted an open discussion to clarify issues
2025.09.02	Continued learning Figma	Strengthen understanding of Figma basics	Limited knowledge of design features	Used in-depth tutorials for better clarity
2025.09.03	Practiced using Figma	Apply skills learned through tutorials	Struggled with advanced tools	Utilized online resources and tutorials
2025.09.04	Practiced using Figma	Apply skills learned through tutorials	Struggled with advanced tools	Utilized online resources and tutorials
2025.09.05	Practiced using Figma	Apply skills learned through tutorials	Struggled with advanced tools	Utilized online resources and tutorials
2025.09.06	Explored advanced Figma tutorials	Improve knowledge of complex features	Difficulty handling complex options	Followed step-by-step learning guides
2025.09.07	Explored advanced Figma tutorials	Improve knowledge of complex features	Difficulty handling complex options	Followed step-by-step learning guides
Summary for the week	Focused on enhancing figma knowledge and practiced both basic and advanced features.			
Task for the next week	Begin creating initial design sketches and continue Figma practice.			
Remarks				
Signature of the Student			Date	2025.09.07
Signature of the Mentor			Date	2025.09.07

Week 3

Duration	Start Date	2025.09.08	End Date	2025.09.14
Date	Task Completed	Objectives of the tasks	Problems	Solutions
2025.09.08	Began work in Figma team workspace	Maintain a unified design style across all UI elements	Certain features not accessible	Activated the Figma Education plan
2025.09.09	Team meeting	Distribute design responsibilities among members	Limited familiarity with Figma	Collected useful references from teammates
2025.09.10	Selected app themes	Establish the project's visual identity and branding	Needed alignment with design goals	Adapted and customized theme to fit the project
2025.09.11	Studied other app examples	Learn best practices for profile design	Difficulty deciding which features to use	Prioritized key features with higher impact
2025.09.12	Continued profile page development	Improve and refine existing design	None	None
2025.09.13	Started inner profile view design	Build an intuitive and manageable profile interface	Hard to visualize structure	Gathered inspiration and ideas from online sources
2025.09.14	None	None	None	None
Summary for the week	Achieved good progress in Figma by starting and refining profile design theme. Page designs, while also setting the project's design theme.			
Task for the next week	Continue developing designs and further Polish existing pages			
Remarks				
Signature of the Student			Date	2025.09.14
Signature of the Mentor			Date	2025.09.14

Mentor/(s) Approval for the Final Submission

Any other Remarks

This image shows a full page of a notebook or worksheet template. It consists of approximately 30 horizontal rows. Each row is defined by two parallel dotted lines, creating a series of uniform gaps for handwriting practice. The entire page is white and contains no other markings, text, or illustrations.
